1.0 INTRODUCTION

Binak oilfield in Bushehr province is a part of the southern oilfields of Iran, is located 20 km northwest of Genaveh city.

With the aim of increasing production of oil from Binak oilfield, an EPC/EPD Project has been defined by NIOC/NISOC and awarded to Petro Iran Development Company (PEDCO). Also PEDCO (as General Contractor) has assigned the EPC-packages of the Project to "Hirgan Energy - Design and Inspection" JV.

As a part of the Project, construction of well location, access road, wellhead facilities (with electric power supply) for W007S shall be done. In addition, construction of new flowline from aforementioned well location to Binak B/C unit (with extension of relevant manifold) is in the Project scope of work.

GENERAL DEFINITION

The following terms shall be used in this document.

CLIENT: National Iranian South Oilfields Company (NISOC)

PROJECT: Binak Oilfield Development - Construction of Well

Location, Wellhead Facilities, Electrification Facilities, Flowlines for W007S and Extension of Binak B/C

Manifold

EPD/EPC CONTRACTOR (GC): Petro Iran Development Company (PEDCO)

EPC CONTRACTOR: Joint Venture of : Hirgan Energy - Design &

Inspection(D&I) Companies

VENDOR: The firm or person who will fabricate the equipment or

material.

EXECUTOR: Executor is the party which carries out all or part of

construction and/or commissioning for the project.

THIRD PARTY INSPECTOR (TPI): The firm appointed by EPD/EPC CONTRACTOR (GC)

and approved by CLIENT (in writing) for the inspection

of goods.

SHALL: Is used where a provision is mandatory.

SHOULD: Is used where a provision is advisory only.

WILL:

Is normally used in connection with the action by CLIENT rather than by an EPC/EPD CONTRACTOR, supplier or VENDOR.

MAY:

Is used where a provision is completely discretionary.

2.0 SCOPE

This specification describes the practices that shall be employed and the Standards that will be required to be met for the UPS sizing of the required AC power for Instrument and telecomm system.

3.0 NORMATIVE REFERENCES

3.1 CODES & STANDARDS

3.4 LANGUAGE & SYSTEM OF UNITS

All documentation, drawings, data, etc. furnished by the manufacturer shall be in English. SI metric system of measurement shall be used except for pipe and pipe fitting sizes, flange ratings and nozzle dimensions in which inch will be used.

4.0 Design Basis

Assumptions for Battery Sizing for AC UPS

Input AC Voltage	400VAC (3Ph)
Input AC Voltage frequency	50Hz ± 5%
AC System Nominal Voltage	110 VAC ± 1%
AC System Voltage Limits	104.50 VAC ~ 134.20 VAC
Overall Aging Factor	1.1
Design Margin Factor	1.1
Battery Backup Time	2 hours
Battery Configuration	2 x 100%
Battery Rate	<u>M</u> rate
Max. Temperature	52 °C
Min. Temperature	5 °C
Design Temperature	20 °C
Power Factor	0.85
Inverter Efficiency	0.9
DC Link Voltage (*)	By Vendor
Min. System Voltage (%)	10 %
Max. System Voltage (%)	+ 21 %
Charger Configuration	2 x 100%
Battery Type	Ni-Cd (SBM)
Nominal Cell Voltage	1.2 V/Cell
Battery Float Voltage	1.4 V/Cell
Battery Boost Voltage	1.44 V/Cell
Battery End Voltage	1.136 V/Cell
Battery Equalize Voltage	1.45 ~ 1.55 V Cell
Battery Initial Voltage	1.65~1.75 V Cell
Battery Cell Number	92 Cells Each Bank

(*) To be finalized by vendor.

5.0 UPS SIZING

The total required AC power for control and telecomm system which shall be supplied by UPS system in Binak manifold in Bushehr province is calculated according to the following data. The output rating of UPS should be 110 VAC.

5.1 AC LOAD PROFILE

According to I&C Power Consumption Summary Doc No "BK-W007S-PEDCO-110-IN-LI-0007", total required AC power for control system has been shown in table (1):

Table (1): AC Load Consumption of instrument & control systems

Systems	TOTAL POWER (KW)
Total Power Consumption	5.92

By considering power factor 0.85, output apparent power will be:

S=6.97 KVA

This consumption is provided by the normal AC supply source through rectifier. Battery does not interfere in normal operating condition. When normal AC supply source fails, then the UPS makes use of its battery to provide the power to loads.

Figure (1) shows the AC load profile for UPS system.

Figure (1): AC Load Profile

5.2 Battery Sizing Calculation

Regarding to the specification for UPS System, the size of battery has been calculated at 100% capacity for each battery bank. Based on IEEE 1115 battery sizing are as follows:

ساخت موقعیت چاه، تاسیسات سرچاهی، خطوط جریانی، تسهیلات برق رسانی مربوط به موقعیت W007S و توسعه چندراهه کلاستر بینک

شماره پیمان:

. 24 - . 14 - 4114

پروژه	بسته کاری	صادر کننده	تسهيلات	رشته	نوع مدرك	سريال	نسخه
BK	W007S	PEDCO	110	EL	CN	0002	D01

شماره صفحه: ۸ از ۹

5.3 UPS BATTERY CHARGER CALCULATION

Based on IPS-M-EL-174(2) standard, the station battery charger should be sized in accordance with the following formulas;

$$N = \frac{V_{DC nominal}}{V_{Cell nominal}}$$

$$N = \frac{110 \text{ V}}{1.2 \text{ V/Cell}} \cong 92 \text{ Cells}$$

$$I_{DC Inverter} = \frac{S_{out} \times P_f}{V_{DC min} \times \eta}$$

Formula (2)

 $\eta = Efficiency of Inverter$

$$I_{DC Inverter} = \frac{6970 \times 0.85}{92 \times 1.136 \times 0.9} = 63 \text{ A}$$

$$I_{Charger} = I_{DC Inverter} + 0.2 \times C_s$$

Formula (3)

I_{Ch} = Charger Required Current

N = Number of Cells (Each battery Bank)

 C_s = Battery Capacity (Ah)

 $I_{Ch} = 63 + 0.2 \times 216 = 106.2 \text{ A}$

6.0 CONCLUSION

The final result of battery / charger systems is calculated as follows:

Number of battery cells : 2×92

Cell Battery Ah : $2 \times 92 \times 216$ Ah

Charger rated current: 2 × 107 A

Note 1: The final sizes of UPS, battery Ah and quantity of cells shall be recalculated by vendor according to the final data. In addition vendor shall consider the minimum voltage 93V for UPS system.

Note 2: Since 1 Kw of 110 VAC UPS will supply 24 VDC existing marshalling system, therefore according to "UPS Single Line Diagram - Extension of Binak B/C Manifold (BK-W007S-PEDCO-110-EL-SL-0002)" a convertor 110 VAC to 24 VDC shall be considered by vendor on distribution panel of UPS.
