شماره صفحه: 4 از 6

### **GENERAL NOTES:**

- 1. Calculations shall be provided for each completely piped actuated valve assembly the stroking times i.e. to close and to open.
- 2. The duty, failure action and stroke time shall all be approved by the Purchaser.
- 3. The actuator shall be designed to operate the valve through its full stroke.
- 4. The full stroke time for on-off valve which is less or equal than 4" size, shall be max. 4 second and for valves greater than 4", 4. The full stroke unite for our-on valve which is 1000 or 5 and 1 second shall be added to the 4 sec for each increment of 1" in valve size NACE MR-0175/ shall be 10 seconds.

5. NACE consideration shall be regarded according to MR 01 75.

H.R: Modified

ISO15156

6. Hydro-test duration shall be in accordance with API 6D.

7. Valves excluding check valves shall be capable of sealing at these pres shall be designed to

- withstand a sustained internal vacuum of 1 (one) barg (i.e. full vacuum) in both open and closed positions. 8. Vendor shall guarantee and demonstrate the required stroking speed, during the Functional Test (FAT).
- 9. The gas-over-oil actuator shall basically comprise of the following components:
- · Actuating control box
- Actuator cylinders
- Gas-over-oil tank
- Hand pump with pertinent change-over valve
- · Metering valve
- Sensing tank and double check valves.
- Double check valves to be considered.
- 10. All accessories shall be mounted on a 316SS sub-plate. Tubing shall be suitably sized TP 316L stainless steel with stainless steel double ferrule compression fittings.
- 11. The actuator design shall be of cylinder type suitable for direct mounting on the valve as specified in Requisition. The actuator shall be capable of withstanding all envisaged line vibrations and movements.
- 12. All accessory equipment, shall be mounted, fully piped, connected and supplied with the actuator.
- 13. The actuator shall be equipped with suitable mechanical valve position indicator.
- 14. Two gas-over-oil pressure tanks which have different hydraulic oil levels are required. The difference between two oil level surfaces must be at least equal to the amount of oil required for a complete valve travel. Two gas-over-oil accumulator tanks (one for open and one for close actuation) complying with relevant accessories and circuit shall be considered. One N2 capacity tank for start up/back up shall be considered by vendor.
- 15.All actuators and accessories shall be clearly and permanently identified by nameplate. The nameplate shall be in stainless steel and affixed to the VALVE, actuator and accessories,
- 16. All actuator parts shall have suitable surface treatment to protect them against corrosion.
- 17. The actuator should be provided with a suitable hand-operated control valve for local operation of the valve.
- 18.emergency hand pump, local push buttons or lever, local position indicator and emergency power gas storage tank for complete operations (one open & one close stroke).
- 19. Self-control circuits shall be equipped with suitable control device for operating speed adjustment.
- 20. According to "Process Basic of Design" Document, Environmental Condition For Field Instrumentation of BINAK Complex Shall Be Considered As Per The Following:

Maximum ambient temperature: 50 (°C) Minimum ambient temperature: 5 (°C)

Maximum steel surface exposed to sun: 85 (°C)

Maximum summer dry bulb: 50 (°C)

Maximum Design relative humidity (%): 100 Minimum Design relative humidity (%): 0 Maximum Design relative humidity (%): 100 Minimum Design relative humidity (%): 0
