## 1.0 INTRODUCTION

Binak oilfield in Bushehr province is a part of the southern oilfields of Iran, is located 25 km northwest of Genaveh city.

With the aim of increasing production of oil from Binak oilfield, an EPC/EPD Project has been defined by NIOC/NISOC and awarded to Petro Iran Development Company (PEDCO). Also PEDCO (as General Contractor) has assigned the EPC-packages of the Project to "Hirgan Energy - Design and Inspection" JV.

### GENERAL DEFINITION

The following terms shall be used in this document.

<b>CLIENT:</b>	National Iranian South Oilfields Company (NISOC)
<b>PROJECT:</b>	Binak Oilfield Development – General Facilities
<b>EPD/EPC CONTRACTOR (GC):</b>	Petro Iran Development Company (PEDCO)
<b>EPC CONTRACTOR:</b>	Joint Venture of : Hirgan Energy – Design & Inspection(D&I) Companies
<b>VENDOR:</b>	The firm or person who will fabricate the equipment or material.
<b>EXECUTOR:</b>	Executor is the party which carries out all or part of construction and/or commissioning for the project.
<b>THIRD PARTY INSPECTOR (TPI):</b>	The firm appointed by EPD/EPC CONTRACTOR (GC) and approved by CLIENT (in writing) for the inspection of goods.
<b>SHALL:</b>	Is used where a provision is mandatory.
<b>SHOULD:</b>	Is used where a provision is advisory only.
<b>WILL:</b>	Is normally used in connection with the action by CLIENT rather than by an EPC/EPD CONTRACTOR, supplier or VENDOR.
<b>MAY:</b>	Is used where a provision is completely discretionary.

## 2.0 SCOPE

### Sub-Surface

➤ **New Wells & Manifold Extension:**

With the aim of increasing the oil production rate from BINAK field, the construction of flow lines and wellhead facilities has been on the agenda. Therefore, National Iranian South Oil Company has intends to establish the project of "Construction of flow lines and wellhead Facilities for BINAK Oil Field."

The most important activities and facilities needed for the project are as follows:

- Construction of 6 wells with 6 wellhead facilities series (class 5000 for wellhead facilities & class 3000 for flow lines)
- Construction of 6 flow lines with construction and installation of supports with all necessary facilities for pipelines and connecting lines to the manifold in BINAK Cluster unit.
- Design, Construction & Extension of existing manifold for connecting new 8 flow lines (which 2 connections will be considered for future) .As mentioned flow line of the six new wells connected to the header A/B on existing manifold(expands if needed) whit new connection and oil from existing oil sump send to header A/B of manifold via oil sump pump (P-1701),also considered two new flow line connection for new.

➤ **Workover wells (with electric power supply):**

Electrification for Wells in Binak Oil fields including 2 parts:

- Construction of 5 outdoor substations 11/0.42 KV & 1 outdoor substation 33/0.42 KV.

In this regard, engineering, procurement & installation of power transformers, diesel generators, LV switchgear, UPS, lighting & ... are in contractor scope of work.

- Routing, detail design, procurement & construction of electrical transmission lines.

### Surface

➤ **New Compressor Station:**

This document defines process design basis for Binak Compressor Station to process sour gas from Golkhali booster/cluster and Binak production unit with cumulative rate of 15 MMSCFD. The new compressors will be added "new" section of existing Binak compressor station plant. Excluding electrical power, which is supplied from existing facilities, all required utilities should be designed as part of project.

➤ **Pipeline 8" & 4":**

With the aim of increasing the oil production rate from BINAK field, the construction of 8 inch gas transmission pipeline from new BINAK Compressor Station to SIAHMAKAN Gas Injection Station and 4 inch gas condensate transmission pipeline from new BINAK Compressor Station to BINAK Cluster, has been on the agenda.

#### 4.0 PROCESS DESIGN BASIS

A new Binak compressor station with working (design) capacity of 15 MMSCFD with TEG dehydration package should be added into existing Binak compressor station facilities to increase feed gas pressure from 5.5 Barg to 54.8 Barg .In order to maximize flexibility of new compressor station, 2 +1 arrangement (2 in operation and 1 as standby) is considered for the system. Moreover:

- Flare system with smokeless facilities
- Instrument air and plant air facilities to cover demand of process

Figure No.2: Relative Location of Binak Oil Reservoir in South West of Iran

- Fire water system should be considered within design package.
- Nitrogen for tank blanketing, compressors sealing.
- Corrosion inhibitor package
- Fuel gas system
- Diesel Fuel Storage and pumping system
- Open & Closed Drain System
- Service Water System

## 7.2 GEOTECHNICAL DATA

According to general geological zoning of Iran, the proposed plant area is located in the coastal zone of Zagros Folded Belt in south-central Fars along the Persian Gulf.

From the lithological point of view the Zagros Folded Belt composed of a sequence of thick bedded sedimentary rocks mainly limestone, dolomite and marl of Paleozoic to Cenozoic age, folded during middle to Late Alpine Organic Stage in Tertiary.

### 7.12 AVERAGE LIGHTNING FLASH DENSITY

#### Flow Lines & Wellhead Facilities:

According to below map, 10-15 thunderstorm days per year exist in BINAK field. Average lightning flash density ( $N_g$ ) may be estimated from following relationship:

$$N_g = 0.04(T_d)^{1.25}$$

$$T_d = 15$$

$$N_g = 0.04(15)^{1.25} = 1.18$$

$N_d$  = yearly lightning strike frequency to the structure or object

$N_g$  = lightning ground flash density in flashes/km<sup>2</sup>/year

## 8.0 GENERAL MATTERS

### 8.1 UNITS OF MEASUREMENT

As a general rule, the SI metric system of units shall be used and particularly:

- Pressure (gauge) Barg
- Pressure (absolute) Bara
- Mass kg
- Temperature °C
- Length m & mm except the pipes diameter for which "inches" are allowed
- Liquid relative density sp. gr. T °C /15°C
- Liquid absolute density kg/cm<sup>3</sup> at 15°C
- Vapour flowing density kg/cm<sup>3</sup>
- Mass kg/h
- Liquid m<sup>3</sup>/h, l/min for fire fighting
- Normal conditions :
  - Vapour Nm<sup>3</sup> (m<sup>3</sup> at 0°C & 1.013 bar a) or Sm<sup>3</sup> vapour (at 15°C & 1.013 bar a)
  - Liquid Std m<sup>3</sup> (m<sup>3</sup> at 15°C)
- Specific enthalpy kj/kg
- Heat rate MW
- Gross calorific value kj/kg
- Viscosity (Dynamic) cp
- In addition to the above units, the following units shall be used for material balance purposes:
  - Vapour flow rate MMSCFD Million Standard cubic feet per day (at 15°C and 1.013 Bara).
  - Liquid flow rate SBLPD or SBOPD Standard barrel of liquid, or Oil, per day (at 15°C & 1.013 bar a).
  - Absolute press=gauge press + barometric pressure.
  - Gas Volumetric flow rate (standard [m<sup>3</sup>/hr], MMSCFD)
  - Liquid volumetric flow rate ([m<sup>3</sup>/hr], STB/D at 15.50 [°C] and 14.70 [psia])

### 8.2 SERVICE LIFE

The design service life of the onshore plant is 25 years. (For Gas Compressor Station) and for other facilities (Transmission Pipelines & Flow lines & Wellhead facilities) shall be designed for a service life of 20 years.

### 8.3 TURNDOWN AND OVERDESIGN

Turndown refers to how flexible a compressor is at different operating conditions (flow and pressure). The greater the turndown capability of the compressor unit, the greater the flexibility the compressor unit has to operate under different flow and pressure conditions.

The turn down ratio and over design of compressor station plant is considered to be 40 % and 110% respectively.

### 9.0 LIST OF ENGINEERING SOFTWARS

Following computer programs approved and authorized for use during EPC stage:

Aspen HYSYS (Ver. 7.3 and higher): Plant Thermodynamic Simulation

Aspen Flare System Analyzer: Flare Network Calculation

Honeywell Predict 6.1: Corrosion prediction Tool

Flare sim: Flare Radiation Studies

Olga: Steady State Pipeline Hydraulic Calculation and Surge Analysis

AutoCAD P&ID: Process Drawing (PFD, P&IDs)

DNV Phast: Fire and Explosion Analysis (Consequence Analysis)

HTRI: Heat Exchanger Thermal Calculations
