## CONTENTS

## 1.0 INTRODUCTION

Binak oilfield in Bushehr province, a part of the southern oilfields of Iran, is located 20 km northwest of Genaveh city.

With the aim of increasing production of oil from Binak oilfield, an EPC/EPD Project has been defined by NIOC/NISOC and awarded to Petro Iran Development Company (PEDCO). Also PEDCO (as General Contractor) has assigned the EPC-packages of the Project to "Hirgan Energy - Design and Inspection" JV.

### GENERAL DEFINITION

The following terms shall be used in this document.

| | |
|---|---|
| COMPANY: | National Iranian South Oilfields Company (NISOC) |
| PROJECT: | Binak Oilfield Development – General Facilities |
| EPD/EPC CONTRACTOR: | Petro Iran Development Company (PEDCO) |
| EPC CONTRACTOR: | Joint Venture of : Hirgan Energy – Design & Inspection(D&I) Companies |
| VENDOR: | The firm or person who will fabricate the equipment or material. |
| EXECUTOR: | Executor is the party which carries out all or part of construction and/or commissioning for the project. |
| THIRD PARTY INSPECTOR (TPI): | The firm appointed by EPD/EPC CONTRACTOR(GC) and approved by CLIENT (in writing) for the inspection of goods. |
| SHALL: | Is used where a provision is mandatory. |
| SHOULD: | Is used where a provision is advisory only. |
| WILL: | Is normally used in connection with the action by CLIENT rather than by an EPC/EPD CONTRACTOR, supplier or VENDOR. |
| MAY: | Is used where a provision is completely discretionary. |

## 2.0 SCOPE

The purpose of this document is to provide the contractors with the design and selection criteria for the new equipment to be provided during the project.

It shall be used in conjunction with data/requisition sheets for present document subject.

## 3.0 NORMATIVE REFERENCES

If the revision of a standard or code is note specified, latest revision should be assumed.

### 3.1 LOCAL CODES AND STANDARDS (LATEST REVISION)

- IPS-G-ME-100 General Standard for Atmospheric Above Ground Welded Steel Storage Tanks.
- IPS-G-ME-110 General Standard for Large Welded Low Pressure Storage Tanks.
- IPS-G-ME-150 General Standard for Towers, Reactors, Pressure Vessels and Internals.

- IPS-G-ME-210 General Standard for Flare Details for General Refinery and Petrochemical Service.
- IPS-C-PM-216 Construction Standard for Machinery Installation and Installation Design.
- IPS-E-PM-100 Engineering Standard for General Standard Requirements of Process Machineries.
- IPS-E-PM-385 Engineering Standard for Process Machinery Piping.
- IPS-G-PM-105 General Standard for Centrifugal Pumps for Petroleum, Petrochemical and Natural Gas Industries.
- IPS-G-PM-120 General Standard for Accessibility and Safety of Machineries.
- IPS-M-PM-115 Material and Equipment Standard for Centrifugal Pumps for General Services.
- IPS-M-PM-125 Material and Equipment Standard for Centrifugal Fire Water Pumps.
- IPS-M-PM-140 Material and Equipment Standard for Positive Displacement Pumps-Rotary.
- IPS-M-PM-150 Material and Equipment Standard for Positive Displacement Pumps-Controlled Volume.
- IPS-M-PM-180 Material and Equipment Standard for Packaged, Integrally Geared Centrifugal Compressors for Utility and Instruments.
- IPS-G-PM-200 Reciprocating Compressors For Petroleum, Chemical, And Gas Industry Services.
- IPS-M-PM-211 Material and Equipment Standard for Reciprocating Compressors for Instrument Air Services.

- IPS-M-PM-220 Material and Equipment Standard for Positive Displacement Compressors-Rotary.
- IPS-M-PM-290 Material and Equipment Standard for Reciprocating Internal Combustion Engines.
- IPS-M-PM-300 Material and Equipment Standard for Special Purpose Gear Units.
- IPS-M-PM-310 Material and Equipment Standard for Special Purpose Couplings.
- IPS-M-PM-320 Material and Equipment Standard for Lubrication, Shaft Sealing and Control-oil Systems and Auxiliaries for Process Services.
- IPS-M-PM-330 Material and Equipment Standard for Mixers.
- IPS-E-PR-250 Engineering Standard for Performance Guarantee.
- IPS-E-PR-330 Engineering Standard for Process Design of Compressed Air Systems.
- IPS-E-PR-460 Engineering Standard for Process Design of Flare and Blowdown Systems.
- IPS-E-PR-700 Engineering Standard for Process Design of Crude Oil Electrostatic Desalters.
- IPS-E-PR-750 Engineering Standard for Process Design of Compressors.
- IPS-E-PR-771 Engineering Standard for Process Requirements of Heat Exchanging Equipment.
- IPS-E-PR-850 Engineering Standard for Process Requirements of Vessels and Separators.
- IPS-E-PR-905 Engineering Standard for Process Design of Dryers.
- IPS-C-SF-242 Construction Standard for Delivery, Testing, Inspection, Quality Control, Commissioning and Maintenance of Fire Fighting Pumps.
- IPS-E-SF-504 Engineering Standard for Fire Fighting Vessels.
- IPS-E-SF-860 Engineering Standard for Air Pollution Control.
- IPS-G-SF-900 General Standard for Noise Control and Vibration.
- IPS-M-SF-504 Material and Equipment Standard for Fire Fighting Vessels.
- IPS-G-GN-210 General Standard for Packing & Packages.
- IPS-M-GN-350 Material and Equipment Standard for Overhead and Gantry Cranes.

- IPS-C-TP-101 Construction Standard for Surface preparation.
- IPS-C-TP-102 Construction Standard for Painting.
- IPS-C-TP-352 Construction Standard for Lining.
- IPS-C-TP-701 Construction Standard for Application of Thermal Insulation.
- IPS-E-TP-100 Engineering Standards for Paints.
- IPS-E-TP-350 Engineering Standards for Linings.
- IPS-E-TP-700 Engineering Standards for Thermal Insulations.
- IPS-E-IN-100 Engineering Standards for General Instrumentation.
- IPS-E-EL-100 Engineering Standards for Electrical System Design.
- IPS-E-CE-210 Construction Standards for Steel Structure.
- IPS-M-PI-130 Material and Equipment Standard for Pig Launching and Receiving Traps

### 3.4 ENVIRONMENTAL DATA

Refer to "Process Basis of Design; Doc. No. BK-GNRAL-PEDCO-000-PR-DB-0001".

## 4.0 ORDER OF PRECEDENCE

In case of any conflict between the contents of this document or any discrepancy between this document and other project documents or reference standards, this issue must be reported to the

CLIENT. The final decision in this situation will be made by CLIENT.

## 5.0 GENERAL CRITERIA

The following general principles and objectives shall be adopted during the selection and design of mechanical equipment:

### 5.1 EMISSION LIMITS

Emission levels for the design and operation of equipment used on the Project must be established on the basis of Iranian legislation and regulations, as defined by the Environmental Protection Agency of Iran and specified in IPS-E-SF-860, Air Pollution Control.

### 5.2 DESIGN LIFE

Equipment and its auxiliaries shall be conceived, configured, designed, and manufactured to achieve a minimum design life of 20 years.

### 5.3 PERFORMANCE

Equipment shall be designed and selected so as to meet the specified performance requirements, including any specified design margins, and to function safely and satisfactorily under all conditions of operation. Performance guarantees shall be provided by the equipment supplier where required.

### 5.4 FIT FOR PURPOSE

Equipment shall be fit for purpose, designed and manufactured so as to be a cost-effective solution that meets the specified requirements.

### 5.5 CONSTRUCTABILITY

Equipment shall be designed so as to enable safe and easy installation. Equipment shall be supplied with any special tools that are required for installation.

### 5.6 OPERABILITY

Equipment shall be designed ergonomically, so as to be simple and safe to operate. All local instrumentation, controls and associate equipment required for full operation shall be provided. Equipment shall be supplied with any special tools that are required for operation.

### 5.7 MAINTAINABILITY

Equipment shall be designed so as to minimize routine maintenance requirements. Where maintenance activities are required, equipment design and layout shall permit safe, unobstructed and easy access. Equipment shall be supplied with any special tools that are required for maintenance activities.

## 5.8 RELIABILITY AND AVAILABILITY

Equipment design and selection shall aim to maximize reliability and availability (and to achieve any specified availability targets).

## 5.9 AREA CLASSIFICATION

All equipment shall be designed to suit electrical hazardous area classification as determined during the basic engineering design phase layout.

## 5.10 UTILITIES

During the selection and design of equipment, consideration shall be given to the availability of utilities. Chemicals and lubricants requirements to be advised by equipment VENDOR.

## 5.11 LOCAL STATUTORY REQUIREMENTS

Any applicable local statutory rules and regulations concerning the design, fabrication, assembly, inspection and/or testing of mechanical equipment shall be adhered to.

## 5.12 EQUIPMENT STANDARDIZATION

Effort shall be made to standardize the spares stocking by minimizing the variety of makes and types of driven equipment, drivers and auxiliary equipment and systems. This standardization shall be applied so far as if does not interfere with the selection of an optimal solution for the specified operating conditions.

## 5.13 EQUIPMENT PACKAGING

In order to have single source responsibility for the functioning of each complete machine train and equipment package, each shall be supplied as a packaged unit to the maximum extent possible. Whenever practical, both the main and auxiliary equipment in each package shall be mounted and delivered on a common skid/baseplate to the maximum possible extent, for ease of handling and to minimize site installation, hook-up and commissioning. Each package skid shall include all interconnecting piping, valves pipe supports, cables and cable trays, with flanged piping connections and junction boxes located at the skid edge.

## 5.14 MATERIALS OF CONSTRUCTION

Materials of construction shall be shown on the equipment data sheets.

## 5.15 DISCIPLINE INTERFACE DOCUMENTS

The following documents are required for interfacing with other engineering disciplines (as may be applicable to specific mechanical equipment items):

- Process flow diagrams
- Piping and instrument diagrams

- Process data sheets
- Motor data sheets
- Instrument data sheets
- Electrical layout/location drawings
- Electrical area classification drawings
- Piping material specifications
- Piping layout/location drawings
- Civil/structural drawings
- Job specifications for packaged units by other disciplines
- Material selection diagrams

## 5.16 SAFETY MEASURES

In addition to the above, safety standards and features that are inherent in the specific mechanical equipment design codes, standards and regulations are also applicable.

Safety features to be incorporated into the design include, but are not limited to the following:

- Ladders and platforms for equipment:
  - Ladder cages
  - Safety chains across platform accesses
  - Step-off platforms, where necessary
  - Platform grating
  - Toe plates.
  - Hand rails
- Enclosed guards over rotating components (e.g., couplings and V-belts).
- Protection of personnel from hot surfaces through the use of thermal insulation or expanded metal covers and guards.

## 5.17 EQUIPMENT FABRICATION

Equipment design shall be based on maximizing shop fabrication and assembly where practical.

All external surfaces for shop fabricated equipment shall be painted in VENDOR's shop.

## 5.18 TRANSPORTATION LIMITATIONS

Equipment packaging, preparation for shipment and delivery shall be in accordance with the project Packing, Marking, Transportation Procedure Doc. No. "BK-GNRAL-PEDCO-000-QC-PR-0045".

## 5.19 VENDOR AND MANUFACTURER DATA & RESPONSIBILITY

5.19.1 The equipment shall be performance, mechanical, electrical and instrumentation guaranteed by vendor/manufacturer.

5.19.2 The vendors/manufacturers shall submit the equipment itp (inspection & test plan), spare part list with their technical offers. All of the tests & inspections shall be carried out after client approval.

5.19.3 The vendors/manufacturers shall submit the filled data sheets of the equipment which are prepared in detail design engineering phase.

5.19.4 The vendors/manufacturers to prepare the required items of the equipment according to NISOC vendor list (latest edition).

5.19.5 The guarantee period shall be eighteen (18) months from the date of delivery or twelve (12) months from the installation date of each equipment/packages at site.

## 6.0 EQUIPMENT DESIGN CRITERIA

The design basis for the following equipment shall be as specified below:

- Pressure vessels
- Storage Tanks
- Air Cooled Heat Exchangers
- Gas Dehydration Package
- Instrument and Plant Air/Nitrogen Generation Package
- Rotating Equipment
- Packaged Equipment and Miscellaneous Items.

## 6.1 PRESSURE VESSELS

Design and fabrication of pressure vessels shall be in accordance with "Specification for Pressure Vessels, No. BK-GNRAL-PEDCO-000-ME-SP-0001" and "Iranian Petroleum Standard No. IPS-G-ME-150(1)".

Materials used for pressure components of pressure vessels shall conform to ASME, Section II (applicable parts).

Non-destructive examination for pressure vessels shall conform to ASME, Section V. Welding for pressure vessels shall conform to the requirement of ASME, Section IX.

The used material for construction of pressure vessels shall be noted in the relevant data sheets.

## 6.2 STORAGE TANKS

Design and fabrication of storage tanks shall be in accordance with "Specification for Atmospheric Above Ground Welded Steel Tanks, No. BK-GNRAL-PEDCO-000-ME-SP-0002" as well as “Specification for Large Welded Low Pressure Storage Tanks, No. BK-GCS-PEDCO-120-ME-SP-0010” and "Iranian Petroleum Standard No. IPS-G-ME-100 (1) for Atmospheric Above Ground Welded Steel Tanks for Oil Storage" and "Iranian Petroleum Standard No. IPS-G-ME-110 (1) for Large Welded Low Pressure Storage Tanks".

Tanks which exceed transportation limitations shall be field fabricated. All plates shall be cut, formed and nozzles welded in shop or factory prior to shipping field fabricated tanks. Smaller tanks shall be shop fabricated.

The used material for construction of storage tanks shall be noted in the relevant data sheets.

## 6.3 AIR COOLED HEAT EXCHANGERS

Design and fabrication of air cooled heat exchangers shall be in accordance with "Specification for Air Cooled Heat Exchangers, No. BK-GCS-PEDCO-120-ME-SP-0001" and "Iranian Petroleum Standard No. IPS- G-ME-245(1)"

## 6.4 GAS DEHYDRATION PACKAGE

Dehydration packages shall be in accordance with "Duty Specification for Gas Dehydration Package No. BK-GCS-PEDCO-120-PR-SP-0001" or VENDOR's standard, whichever is more stringent.

## 6.5 AIR COMPRESSOR PACKAGE

Design and fabrication of air compressor package shall be in accordance with “Specification for Air Compressor Package, No. BK-GCS-PEDCO-120-ME-SP-0006" or VENDOR's standard, whichever is more stringent.

## 6.6 ROTATING EQUIPMENT

### 6.6.1 General

Rotating equipment drivers shall be electric motors unless otherwise specified on equipment data sheets.

### 6.6.2 Centrifugal Pumps

For general service, pumps shall be provided in accordance with "Specification for Centrifugal Pumps for General Services, No. BK-GCS-PEDCO-120-ME-SP-0004".

For process service applications, pumps shall conform to "Specification for Centrifugal Pumps For Process Services (API 610), No. BK-GCS-PEDCO-120-ME-SP-0003". For high-head applications, multistage ring section pumps shall be used. In all services (even water) BB4 type pumps are not allowed to use.

The metallurgy of pump components shall be suitable for the intended application. For sour service applications, materials meeting the NACE MR0175/ISO 16156 standard requirements shall be used.

Pumps and motors with speed increasing gears (if required) shall be mounted on a common baseplate.

Spare pumps in critical services shall be equipped with automatic start facilities.

All pumps shall be directly coupled to their drivers. All pumps and their drive train shall be mounted on common bases of rigid construction.

6.6.3 Reciprocating and Rotary Screw Compressors

Rotary Screw-type compressors may be considered for applications involving relatively low flows and differential pressures. CLIENT approval is required for the application of this compressor type. The design and manufacture of reciprocating compressors shall be in accordance with the "Specification for Reciprocating Compressor (API 618), No. BK-GCS-PEDCO-120-ME-SP-002 ".

6.6.4 Packaged Equipment and Miscellaneous Items

Packaged units shall be VENDOR's standard process design and in compliance with the data sheets for the packaged units. Mechanical design and fabrication for the equipment involved shall be as per the corresponding specifications for those types of equipment.

Miscellaneous items (such as flare packages, chemical injection systems, utility units, diesel engines, handling equipment) shall be VENDOR's standard design and in compliance with the corresponding specifications & data sheets.

## 7.0 MISCELLANEOUS

### 7.1 PAINTING

Above ground facilities (e.g., equipment, piping, and structural steel) shall be protected by using external paint for appearance and corrosion prevention in accordance with the project "Specification For Painting, No BK-GNRAL-PEDCO-000-PI-SP-0006".

## 7.2 COATINGS AND LININGS

Internal coatings or linings for mechanical equipment shall be as specified on the equipment data sheets.

## 7.3 INSULATION

Above ground equipment and piping shall be insulated for the conservation of heat and protection of personnel as indicated on the line list and/or the equipment data sheets or P&IDs.

## 7.4 FIELD ASSEMBLY, FABRICATION AND INSTALLATION

Items that require field assembly and/or fabrication shall be identified on the equipment data sheets.
